

Greetings from Dr. Sullivan and Staff

Fall 2013

Welcome Stacy!

As some of you know, Tammy has been in the process of adopting a child from the Democratic Republic of the Congo.

Therefore, she will be reducing her schedule to one day a week. We are so pleased to introduce a new addition to our team that will be doing hygiene as well. Please help us in welcoming Stacy to our practice! Tammy and Stacy have spent several weeks together training and acclimating her to our office and patients. She has been a great addition to our team! She is very compassionate and caring and her cleanings are gentle yet thorough. She looks forward to meeting you and helping you achieve your oral health goals.

Did you know...

Keeping up with your oral hygiene will help you AND those you are close to?

Research has proven that bacteria found in your mouth can be transferred to your children's mouth. Newborn babies do not have tooth decay bacteria but close contact, even with caregivers can pass on bacteria that causes decay and gum disease. It is important to keep up with your oral health...for you *and* your family!

Laser...the many uses!

We have now been using the laser for 5 years in our practice. We continue to see improvements in gum health with patients who get Laser Bacterial Reduction done on a consistent basis. Research is also showing that the laser improves the longevity of implants. We have had great success with it reducing sensitivity of root surfaces and the duration of cold sores.

Ask us at your next appointment how the laser can benefit you!

Check us out on the web!

We are now on Facebook... Please take a look and "like us"! Also, check out our website: www.drmargotdds.com. Share the site with your family and friends! We appreciate your referrals!

Holiday Hours

With the Holidays approaching, we will be open Friday, Dec 13th and Friday, Jan 3rd in addition to our regular hours. The office will be closed Dec 24-27, Dec 31st and Jan 1st.

Fun Dental Facts...

- ~The plaque found on your teeth is home to more than 300 different species of bacteria!
- ~In China, in 1489, the first toothbrush with bristles was made, using hair from hogs, horses, and badgers. The first commercial toothbrush was manufactured in 1938.
- ~A snail's mouth is no larger than the head of a pin, but can contain over 25,000 teeth!
